

The Angle Port "Brick" Barrel Weight for Over/Unders is designed to center the weight closer to the guns center of balance for a smoother gun swing.

The "Brick" Barrel Weight is easy to install between the top and bottom barrels and is concealed under the fore-end stock for a more aesthetic appearance.

Manufactured of high quality lead, the "Brick" Barrel Weight can be easily modified to 3 different weights for your shooting style.

### Installing the "Brick" Barrel Weight for O/U:

Remove the guns fore-end stock. Remove the (4) phillips head set screws from the barrel weight and separate the 2 sides of the weight. Place the weight side with the nuts on one side between the top and bottom barrel positioned with the back edge of weight just above the rear forearm clip, position the other half of the weight on the opposite side and insert and tighten the set screws and reattach the fore-end stock.

#### WARNING:

This product contains lead, a chemical known to cause birth defects or other reproductive harm. DO NOT place your hands in your mouth after handling this product or place the product in your mouth. Wash your hands after touching this product.

#### Practice Good Gun Safety!

Always make absolutely sure the firearm is UNLOADED before proceeding with any disassembly.
